

TCP MDT FOR STUDENTS AND TEACHERS

The main features and conditions for using TCP-MDT licenses for students and teachers are the following:

Product Features

MDT Professional + Surveying (educational use only)

Installation over AutoCAD, BricsCAD or ZWCAD

Installation in a single computer

Maximum license period: 9 months

Limitations: 1.000 points; maximum length of horizontal alignment 1.000 meters

APLITOP will provide a temporal link with the installation program. Education Centre must download the files and store them in its own server, to be distributed to the users.

User Registration

First the Educational Centre will send to APLITOP a list of students and teachers who will have access to the program, including identification number, full name and email.

Once installed the software, in the first run a dialog will request the user data and get the computer ID. A warning will be shown in compliance with the Personal Data Protection RGPD 2016/679. APLITOP web server will check if that user is in the list of authorized persons, and in this case will activate the application.

Technical Support

Technical support for installation or operation is excluded for students at all times, and it's available only for registered teachers.

Exclusive use for education

The software licenses shall be used solely and exclusively for educational purposes, and used within the field only by authorized persons.
